bit.B

The Process and Energy Monitoring System for your Business

bit.B is a solution for small and medium sized businesses. Based on easy, affordable and retrofittable sensors, different types of data about production , environment or energy are collected, interlinked and evaluated.

The data gives you added transparency about your business processes and the chance to derive optimization potentials. The system can be installed during ongoing operations and based on a wireless radio solution, easy to retrofit.

The bit.B package contains:

bit.B Sensor node

For the processing of sensor signals into a data format which is readable for the bit.B system

bit.B Bus node

integrates existing data from intelligent devices

bit.B Gateway

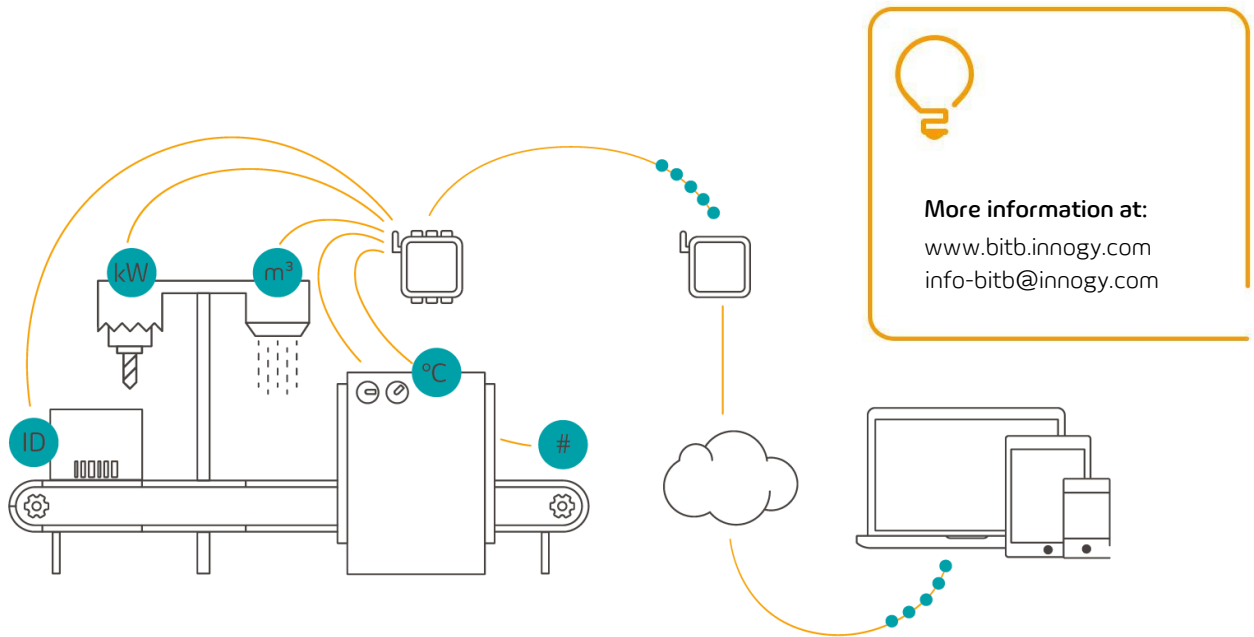

for transmitting the acquired data to the bit.B server

bit.B Online Monitor

for analyzing/visualizing the detected sensor data

Optional

different sensors, depending on the specific use case
